

A few days off can soon add up

Research shows that children who have more than 10 days off (95%), achieve lower grades. Missing 17 days of school can mean your child achieves a whole level less than they are capable of in the Y6 Sats. And this then reduces GCSE results and employment chances.

90% attendance sounds okay but actually means a child has had the equivalent of half a day off every week! This adds up to 4 weeks over the year - 100 lessons missed.

How many lessons did it take you to learn to drive, play an instrument or improve a sport skill? Think what you could achieve in 100 lessons!
